ABOUT ME

Junior Full-Stack Developer with hands-on experience building and maintaining a complete e-commerce web application using Node.js, Express, Sequelize, MySQL, and Redis. Experienced in backend development, REST API implementation, database modeling, server-side rendering (EJS), middleware architecture, and automated testing. Focused on writing secure, maintainable, and well-structured code. Comfortable working across backend and frontend layers and understanding interactions between database, server, and UI.

TECHNICAL SKILLS

Frontend & Backend:

JavaScript, Node.js, Express.js, EJS, Bootstrap, Git

Architecture & Systems:

REST API development, MVC architecture, authentication and authorization, middleware, session handling

Database & Tools:

Sequelize, MySQL, Redis, Multer, Nodemailer, Helmet, express-rate-limit, Swagger

Testing:

Jest, Supertest, Playwright

Workflow:

Using AI tools for code writing, debugging, refactoring, and development productivity

PROJECT EXPERIENCE

Amigurumi Nest — E-commerce Web Application

GitHub: github.com/Hanna-Zozulia/Amigurumi-Nest

Full-stack development of a complete e-commerce platform.

WORKFLOW & COLLABORATION

- Used Jira for task tracking, development planning, and workflow management
- Worked with Figma designs for UI/UX understanding and implementation guidance
- Maintained technical documentation (README, test documentation, and project notes)
- Structured project with clear separation of backend, frontend, and testing layers

BACKEND & ARCHITECTURE

- Designed and implemented a REST API using Express.js (MVC structure)
- Built controllers for products, users, orders, reviews, and authentication
- Designed database models and relationships using Sequelize (MySQL)
- Implemented middleware for authentication, sessions, cart logic, and rate limiting

SYSTEM FEATURES

- File upload system with validation (Multer + MIME checks)
- Email notifications using Nodemailer
- Content filtering and input validation (leo-profanity)
- Redis caching for performance optimization
- API documentation using Swagger

TESTING

- Implemented unit and integration tests (Jest, Supertest)
- Developed E2E/UI tests (Playwright)
- Organized test structure with separate test files for different layers (unit, integration, E2E)
- Tested core business flows: authentication, cart, checkout

KEY STRENGTHS

- Full-stack development experience across backend, database, and frontend layers
- Strong understanding of backend architecture and system design principles
- Experience with authentication, session handling, and security practices
- Structured and modular code organization (controllers, services, middleware, models)
- Hands-on experience with automated testing at multiple levels
- Understanding of performance optimization through caching (Redis)

PROFESSIONAL DEVELOPMENT

- Expanding full-stack development skills with focus on modern frontend technologies (React).
- Improving ability to build more complex and interactive web applications.
- Strengthening understanding of scalable application architecture and real-world project development.
- Continuously developing practical experience through building full-stack personal projects.

EDUCATION

Junior software developer

Ida-Virumaa Kutsehariduskeskuse

2024-2026

🎓 Certificate: <https://www.kutseregister.ee/ctrl/et/Tunnistused/vaata/11547170/1>

LANGUAGES

- Ukrainian — Native
- Russian — Advanced
- English — Elementary
- Estonian — Elementary

INTERESTS

- Reading books on psychology, self-development, and human behavior
- Yoga and maintaining a balanced lifestyle
- Learning new skills and expanding knowledge
- Personal growth, mindset, and productivity
- Technology, web development, and digital products
- Exploring ideas related to motivation, habits, and success
